timber hybrid

vellacine architectural systems offers designers, specifiers and end users the advantage of 35 years unbroken trading history and solid organisational team with a depth of expertise and proven track record in providing glazed envelope solutions

commitment to quality and customer response flexibility have been pivotal to our systems incorporation in many prestige developments throughout the uk including:

government: military/naval bases, courts, prisons

leisure: sports arena, hotels, exhibition centres

public: universities, schools, hospitals

commercial: industrial parks, shopping malls, office/retail

positive design and manufacture co-ordination ensures that our product range continually meet the high specification demands within this specialist sub-contract arena

our dedicated personnel co-ordinate a full design, manufacture, project management, supply and install service to ensure the original design intent is realised in the final product without compromising quality, technical performance and functional aesthetics

vellacine architectural systems can now release designers from all constraints, providing performance flexibility for:

- architects
- specifiers
- contractors
- local authorities
- end users

our commitment to provide performance driven solutions from concept to completion is an achievement we realise everyday

aluminium

performance aluminium systems providing the highest levels of energy efficiency, security and design tested to perform in all environments from ground floor to high rise

- multiple design possibilities
- enhanced curtain wall
- flush rebated door leafs
- double acting door leafs
- automatic entrance doors
- bi-folding doors
- tilt-turn/side/top-hung windows
- thermally broken profiles
- pressure equalised solutions
- independently tested/assessed to comply with all relevant british, european and global standards

pvc-u

excellent thermal properties and high levels in energy efficiency combined with low maintenance and long life are provided by a pvc-u system range that contributes to a reliable and sustainable future on new build and refurbishment

- enhanced slim-line profiles
- multiple design possibilities
- multi-track patio doors
- vertical/horizontal sliding vents
- tilt-turn/side/top-hung windows
- composite doors
- wide range of colours

timber hybrid

high insulation composite timber and aluminium systems combine the benefits of the long life, low maintenance of aluminium externally with the qualities and aesthetics of engineered timber internally

- high thermal insulated profiles
- tilt-turn/side/top-hung windows
- enhanced curtain wall
- in/out opening doors
- wide range of colours

complete façade solutions

curtain wall
sloped roofs
multi-storey atria
windows
doors
automatic entrance doors
