vellacine offers home owners and self builders the advantage of 35 years unbroken trading history and solid organizational team with depth of expertise and proven domestic and commercial track record

through personalised consultation at the design stage we use our technical expertise to provide the right solution which ensures your design and vision are realised with a range of systems that can reduce energy bills, decrease the carbon footprint of your home, improve the indoor climate and your quality of life

with ever increasing demands on homes to be more durable, efficient and sustainable, the boundaries of design and performance are continually challenged to provide living spaces that have enhanced viewing areas with a synergy that blurs the boundaries between indoor and outdoor space

our narrow profile glazed systems allow maximum light penetration, thermal insulation, security and architectural design to be combined delivering style to your home without the need to compromise

from stylish domestic renovations to cutting edge new builds, vellacine can provide a personalized glazed solution from our modern and virtually maintenance free pvc-u, sleek and understated aluminium or high performance timber hybrid ranges

with the addition of a range of roofline products, garage doors and an architectural hardware trade counter it is possible for us to provide the complete home solution service under one roof

whether your project is a replacement front door or a custom glazed extension with multiple sliding folding doors, our high level of service, commitment and attention to detail, from initial enquiry through to installation, remains the same

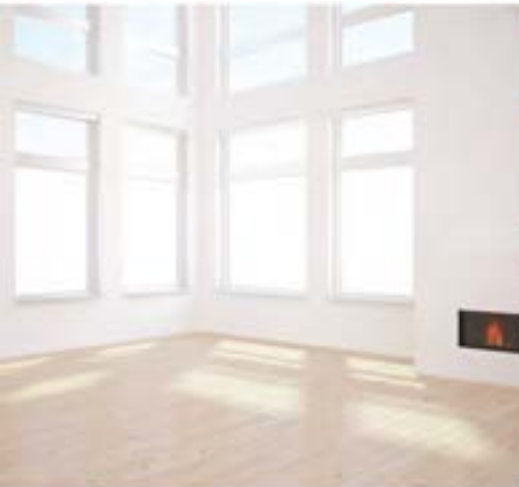

our dedicated personnel will co-ordinate a full design, manufacture, project management and installation service which will keep you informed throughout

our commitment to provide the right solution for your home is an achievement we realise everyday

windows

windows make a significant contribution to the style and character of the home environment having a major impact on visual aesthetics, energy consumption and property value.
